

Objective: To deploy a secure, multi-step admission workflow that protects the integrity of the official school database. Applications are held in a temporary queue and only migrate to official student records after rigorous verification and fee payment.

The Workflow:

- **Step 1: Public Online Application (Lead Gen)** Parents submit basic details via a public portal (no login required). The system saves this to a temporary holding table and issues a unique Application Reference Number (e.g., 2026-1-001).
- **Step 2: Public Status Tracking** Parents can independently monitor their application status (*Pending, Shortlisted, Admitted, Rejected*) on the school website using their Reference Number and the student's Date of Birth.
- **Step 3: Admin Shortlisting** Branch Admins monitor a dashboard of "Pending" applications, reviewing submissions and updating statuses to "Shortlisted" to invite parents for the final step.
- **Step 4: Verification & Conversion** Parents visit the school for document checks and fee payment. Admins verify the pre-submitted data, check a mandatory "Fees Paid" box, and submit. The system automatically migrates the temporary data into the official database, generating the permanent Student ID and parent/student login credentials.
